Pomegranate mixture not freezing the most likely cause is dust and dirt in the capacitor, which is placed on the left side. Place the large round stamp on the back of the cooling system5. Don't dip the tank's eyelids in Water7. There are even some installation requirements for the grain manufacturer. Security requirements include: keeping it away from the source of heat generation, humidity, dust, water and fuel gases; store the machine within the age. Slushie is a drink made with flavored powdered ice. The flavored ice could be one of the best food inventions of all time. You should ask yourself what's so special about granizer manufacturers and how they make ice so unique. To start, while other frozen beverages contain small ice crushed ice crystals in ice cubes, granite manufacturers create their own water-snow water. Granized machines used at home do not have the capacity to freeze, while commercial models come with this functionality. Wish to make a lazy cocktail, you should learn to operate the Slushie machine and today the SlushiemachineGuide.com team will guide you throughout the process! Handbook of instruction of the wing machine, such as any other machine, loose machines also come with typical operation instructions and a safety guide. Before we go through the main process, take a look at the instruction manual to help us use the frozen beverage manufacturer. While filling the compartments for drinks, be sure to fill it to the minimum filling line and do not exceed the maximum filling line. A jug of a gallon can contain enough syrup to make 90 drinks of 12 oz and fill the 3 times. Keep in mind that you never add liquor on the Márquina Slushie. The damage can be caused by compressor overheating. Lubricate the interior of the soft seal and dazzle it in its position on the transmission axis of the corner of Portallina4. Portallina4. Machine Filter This is the most important customer experience and simple to solve. To prevent this from happening, make sure the machine is placed in a well ventilated area. This will allow the ice to softly defrost and retain the mixture in a cold state during the night. Lubricate O rings, seals and plunger with safe oil fat (available from SlushCo)2. The containers have separate switches that can be used for both soft and granite cooling, i.e. whipped or slushie. When you turn on the power switch, the fan engine will start working. Slide the bowl/tank cover over the agitator and align with the big rear seal on the back of the freezer9. Who doesn't love slushies? Remove the large round seal on the back of the thread cannon and the soft seal on the axis of the unit10. Align the shaker with the silver bush in the front of the bowl by lifting the shaker while sliding the bowl in position10. Step 2: Fill out the Slushy Machine At first filling the container with liquid, careful not to overlay it. The quality of the fat depends entirely on you. At the end of please change the switch from the freeze 'I' to the 'II' refrigerated. How long does it take to freeze a smooth machine? In case they are loose, push the plastic backwards and slightly down to restart it. Draw the machine after use. When you purchase a SlushCo mesh machine, complete cleaning instructions will be provided but the instructions below apply to all mesh machines. Most leaks will be resolved with good cleaning practices. Fill your mesh machine with clean and warm water and a suitable soft detergent4. But it is suggested that you avoid using alcohol on the machine. Now, go ahead and try to make yoursoda. But in case you want to change the viscosity, then the control bolt can turn. Once the tank is free, slide outside the agital agitator/spindles Planistic spiral of the refrigeration cylinder. As long as you follow the instructions, the long time that takes time to produce the thread of half an hour to an hour. To ensure that the process of the thread is not affected, you need to make sure that some things are counted to: To preserve the material inside the container, use the soft drink mode. Before turning off the product and leaving the material inside, be sure to freeze the content for at least one hour. This will create a high in the corner, and avoid the lych free. Do not try to adjust the blockers in the back of the corner. Draw any remaining slush3. If a layer of dust/debris is present, this will stop the air flow that will not freeze the click or hit noise à † this is perfectly normal, especially when the corner is new. à † Care that the syrup to the water relationship is correct à † Airflow à € "The corner needs 15cm of clear space on each side and the condenser of the back à † - must be cleaned every 2 weeks. [I] To clean (allowing the air to circulate), remove the side panel and brush with a soft brush. The masks are designed to rotate 24/7. So you don't need to worry about it. Make sure the list is diluted. Otherwise, the supply of the Liquido will obstruct. For better performance, you can use the base that has been specially designed for the mesh. The condenser the condenser can be accessed within the side panel (which is eliminated easily). Remove the tank when gently lifted the front and then slide freely free from the rear 8. Do you have more questions about the smokes and the smismas of Slushie? After 15 minutes, drain and discard the water, then repeat step 3 with fresh water dismantling AS. AS. 7adindu al ed eje le ne anocilis ed olles led roiretxe le etnemaregll racirbulL .1 :azeipmil ed senoccurtsnl .5 :setrap racirbul arap allam ed aniuqAm It is possible to put soda on a misma of Slushie. Today in DEA, Slushie's masks are often used to make the Coca-Cola smushi and other soft drinks. It is the most likely cause. It is not recommended to change them. Always check if the drink compartments are closed and sealed. If you do not use the night mode, it can result in the ice is not challenged properly, so if the corner rotates through the corn, the mixture spindle can break. The base has an Azãar level of 34 ° that corresponds to 64 ° Brix. When making soft drinks, dilute base 1 to 5.5 using water. In case of other soda or granite recipes, follow the instructions given by the syrup manufacturer. When using the corner, keep in mind not to use low heat in heat and nostar of fruits with fruit parties in the corner. From the planning taz, lid, thread supply, mixing engine, drip tray, selection switch, to the sticker. The corner has several stickers around it that are signs of security, symbols and labels. The container will have the last amount labeled on à © I. The AzãCar is the key ingredient in the quality syrup, since it is the Azide that acts as the antifreeze in the freezing barrel. Turn off the freezing switch/refrigeration of the mesh corner to the position off2. à † Care yourself that rubber stoves and stamps are not correctly equipped and equipped with † to clean and lubricate the 3 weekly stamps.
